

LIST OF CURRENT CLAIMS

1. (Currently Amended) An emergency escape tool, comprising:
a main member;
a cutting device having a blade which is provided on an end of the main member[[,
and]];
a hammer provided on the main member at an end opposite from the cutting device
[[is]]; and
a clip detachably mounted on the main member to mount the main member on a
belt, wherein the clip has two mounting portions bent inwards and two flexible arms to
clip the main member at lateral sides thereof;
wherein a first hook is disposed on one of said mounting portions and a second
hook is disposed on a back of said clip, and a holder has opposite ends thereof hooked by
the first and second hooks respectively.
2. (Original) The emergency escape tool as defined in claim 1, wherein the main
member has a hole in which a whistle is received.
3. (Original) The emergency escape tool as defined in claim 2, wherein the
whistle is provided with a light emitting device.
4. (Original) The emergency escape tool as defined in claim 3, wherein the
whistle is provided with a button to turn the light emitting device on and off.
5. (Original) The emergency escape tool as defined in claim 1, wherein the main
member has a recess and a cover to close the recess.

6. (Original) The emergency escape tool as defined in claim 1, wherein the main member has two covers detachably mounted on the ends thereof to shield the cutting device and the hammer.

7. (Cancelled)

8. (Cancelled)

9. (Cancelled)

10. (Currently Amended) The emergency escape tool as defined in claim [[9]] 1, wherein the hammer has an impacting portion that is substantially parallel to an elongated ~~axe~~ axis of the main member and the blade of the cutting device has a cutting portion that is substantially perpendicular to the elongated ~~axe~~ axis of the main member.

11. (Currently Amended) An emergency escape tool, comprising:
a main member;
a cutting device having a blade which is provided on an end of the main member;
a hammer provided on the main member at an end thereof opposite from the cutting device [[is]], and

a clip detachably mounted on the main member, wherein the clip has two mounting portions bent inwards and two flexible ~~arm~~ arms to clip the main member at lateral sides thereof;

wherein a first hook is disposed on one of said mounting portions and a second hook is disposed on a back of said clip, and a holder has opposite ends thereof configured to be hooked by the hooks respectively.

12. (Cancelled)

13. (Original) The emergency escape tool as defined in claim 11, wherein the main member has a recess to receive goods therein.

14. (Original) The emergency escape tool as defined in claim 11, further comprising a whistle detachably mounted on the main member, wherein the whistle is provided with a light emitting device for lighting.
